

Ridder Climate Screens
Improve your horticultural profit

Improve your horticultural profit

Ridder as a screen supplier

Ridder is a trusted and established name in the industry. For over 60 years, our customers have been accustomed to the best possible quality, high delivery standards and excellent service. We distinguish ourselves by the functionality of our products, our customer-focused responsiveness, the relationship of trust we build with you as a customer, our fast and effective handling of complaints, our clear distribution philosophy and the extensive product information we provide online. These are the same values and qualities that you can expect from Ridder Climate Screens.

Choosing Ridder Climate Screens

Why choose Ridder Climate Screens? Below are some of the benefits we offer.

Focused on your needs

Together with greenhouses builders and screen installers, we can determine which screen is most suitable for your situation. To best meet your needs, we believe personal contact with you is essential. Our many years of experience in the horticulture sector, combined with our product range and our extensive network, allows us to determine the best solution for every situation.

Perfect quality

Our screens are UV resistant and meet the highest safety and quality standards. Our fire-resistant FR screens come with the required certification (with regard to fire safety, toxicity, etc.). This will help you comply with laws and regulations as well as insurance requirements. Installed in greenhouses, our screens can be rolled up into compact screen packages, maximizing the amount of light that can reach the plants when the screens are open. We have our own laboratory to test and guarantee the quality of our screens.

Broad network

We have a broad network with extensive experience in international horticulture. Our screens are an excellent addition to Ridder's international product range. Together with greenhouses builders, screen installers, our extensive dealer network and local support offices, we can help you determine the best climate screen for your needs.

Fast delivery from stock

We can supply a wide range of screens, most of which are available from stock. We can also produce screens to order. At our location in the Netherlands, every screen is made to order according to the customer's requirements and supplied in the desired length using the most modern cutting technology.

Developing Together

Together with our customers, we are constantly improving our screens based on the latest screen developments. For instance, we are able to attach guide strips to both sides of the screens with great precision.

This allows the screens to be inserted faster and makes the use of screen clips a thing of the past. As a result, the screens can be set in place just before the crop is planted, keeping the screens cleaner for longer. This will benefit both you and your crop.

Great value for money

Thanks to our carefully selected product range and use of high-quality knitting technology, we can offer excellent value for money compared to our competitors. It means we can provide greenhouses builders, installers and growers with top-quality screens at very reasonable prices. This allows customers to quickly recoup the cost of their screen investment, despite rising energy prices and stricter regulations.

Interested?

Are you a grower and are you interested in our product range? You can find more information about our screen product range online. Our screens are only available via greenhouse builders or screen installers.

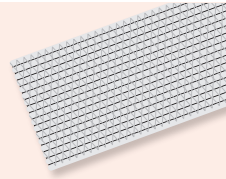

An overview of our climate screens

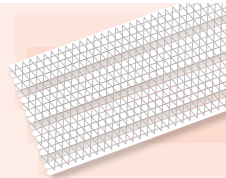

Ridder Light Restriction Screens

This screen will allow you to meet current light emission requirements while letting in as much heat as possible.

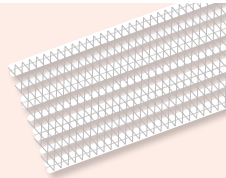

Ridder Light Diffusion Screens

High-quality light diffusion screens that disperse sunlight over your entire crop for healthier plants and higher yields.

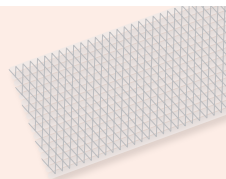

Ridder Light Diffusion Screens OPEN

Light diffusion screens with an open structure, which combined with ventilation, provide maximum cooling and shade.

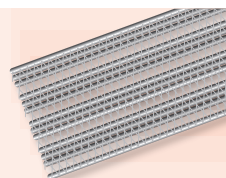

Ridder Energy Saving Screens

The most transparent energy-saving screen on the market, letting in the maximum amount of daylight. Specially designed for heat intensive crops.

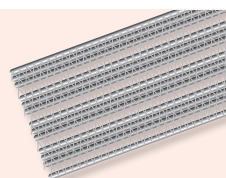

Ridder Sun Shading Screens

High-quality shading screens that not only protect your crop from excessive sunlight, but also save energy and prevent condensation caused by sudden drops in temperature.

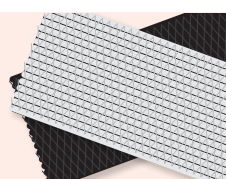

Ridder Sun Shading Screens OPEN

The ultimate open-structure sun shading screen for warm climates or sensitive plants, requiring no additional ventilation openings.

Ridder Black Out Screens

Our black out screens will block daylight. These screens are also ideal for keeping energy costs under control.
